Joonas Hiltunen

Software Developer at Vincit

Tampere, Pirkanmaa, Finland

Summary

I am a versatile full-stack developer with around five years of comprehensive experience under my belt in various projects of different scales. I excel in C# and JavaScript/TypeScript development, but I'm always open to new challenges and can quickly learn new technologies as required.

I'm particularly interested in exploring cloud technologies and expanding my knowledge in that area.

In my free time, I'm pursuing a master's degree with an estimated graduation in summer 2024. I'm excited to continue learning and growing as a developer, and I look forward to new opportunities and challenges in the future.

Experience

Vincit

Software Developer

March 2022 - Present (1 year 11 months)

Tampere Metropolitan Area

I hold a role where I successfully contributed to the development of a cutting-edge Power BI Embedded-based reporting microservice for a client's new software product. Throughout the project, I utilized my expertise in React, .NET Core, and PostgreSQL, and I also gained valuable insights into working with Power BI Embedded and its APIs.

Since the development of the project was completed, I seamlessly transitioned into a collaborative position as part of the client's team responsible for reporting. Here, my focus lies in maintaining and enhancing the reporting module of their flagship product—an extensive enterprise application predominantly running on the .NET Framework.

The experience gained through these projects has been invaluable, encompassing the latest cutting-edge technologies and hands-on involvement with large enterprise applications.

NomiCam

2 years 10 months

Software Developer

September 2020 - February 2022 (1 year 6 months)

Tampere, Pirkanmaa, Finland

Maintain NomiCam's MIP software and its plugins, written mainly in C#.

- Implemented a continuous delivery pipeline from scratch with Azure pipelines

Maintain (& co-wrote) front- and backend software for NomiCam Dynamic

- Frontend was implemented using React (CRA)
- Backend was implemented with Python using Flask and Socket.io
- Dockerized both front- and backend
- Build a continuous delivery pipeline using Azure Pipelines

Some other projects:

- Designed and implemented a remote control for an industrial robot using .NET Core.
- Designed, build, and configured a new internal network for the company mostly using Unifi gear.

Junior Software Developer

September 2019 - August 2020 (1 year)

Tampere, Pirkanmaa, Finland

Software Developer Trainee

May 2019 - August 2019 (4 months)

Tampere, Pirkanmaa, Finland

Worked as a software development trainee:

- Developed some plugins for MIP software using C#
- Wrote user documentation for MIP plugins

Education

Tampere University

Master of Science - MS, Software Engineering · (August 2021 - May 2024)

Tampere University

Bachelor of Science - BS, Computer Science · (August 2018 - September 2022)
